27x9-12 VOLTYRE-CROSSTOUR MO-21

ATV tires with increased flotation conditions (mud, sand, clay, snow) at ambient temperature from minus 30°C. On these surfaces this type of rubber has excellent traction. It does not discomfort while operating at high speeds. The construction is light and at the same time the use of modern technologies allows for high production. The special rubber compound provides a good attack but still elastic enough to let the tire roll over the surface.

Tire parameters:

Brand
Overall diameter, mm
Profile width
Rim diameter, inh
Static RADIUS, mm
Load index
Maximum load, kgf
Pressure, kPa
Maximum speed, km/h
Rim
Model
